

AI UX Research & Product Evaluation

LinkedIn Featured Portfolio Notes

Pranav Likhi

Freelance UX Tester | Aspiring AI UX Researcher | Human-AI Interaction, Multilingual UX & AI Productivity Evaluation

Focus	Platforms	Languages
AI UX research, human-AI interaction, voice AI evaluation, multilingual product evaluation, AI productivity/workflow UX	Prolific, Userlytics, UserTesting, PlaytestCloud, TELUS/AI evaluation	English + Hindi + Punjabi; French learning path

Professional Summary

I am building experience in UX research, AI product evaluation, human-AI interaction, behavioral research, and structured evaluation through paid research and testing projects. My work includes AI training studies, AI-moderated interviews, moderated AI focus groups, conversational AI assistant feedback, human-AI conversation psychology studies, voice AI and speech-quality evaluation, AI voice performance/model-output assessment, AI-assisted collaborative product ideation, rubric-based candidate/interview evaluation, language assessments, usability tests, product feedback, comparative website reviews, game playtests, and scenario-based decision-making studies.

I provide structured feedback on how users understand, trust, evaluate, hear, and interact with digital products, AI tools, websites, mobile apps, games, conversational systems, voice-based AI/human interactions, financial services experiences, GenAI-supported brainstorming environments, and rubric-based evaluation tasks requiring careful scoring and written justification.

My background in customer service, marketing, travel services, and operations helps me connect product feedback with real business and user needs. My current direction is toward UX Research / HCI, with a focus on AI UX research, conversational AI improvement, human-AI interaction, moderated qualitative AI research, voice-AI and speech-quality evaluation, multilingual product evaluation, AI-assisted product ideation, structured AI/content evaluation, financial services UX, and user research for AI tools.

Research & Testing Experience Snapshot

Area	Representative work	User value evaluated	Relevant skills
Human-AI conversation psychology	University-led voice-based study comparing conversations with human and AI partners	Comfort, anxiety, social pressure, expectations, perceived interaction quality, social well-being	Human-AI interaction research, HCI psychology, voice-based conversation feedback, emotional response reflection
AI decision-making focus group	75-minute live moderated online focus group on everyday AI use and decision-making	AI adoption, responsible AI use, decision support, trust, human judgment	Moderated focus groups, qualitative discussion, human-AI interaction, active listening
Voice AI, speech quality & performance evaluation	Voice-rating studies evaluating short audio samples, AI model voice delivery, naturalness, timing, pacing, and expressive performance	Voice clarity, listening fatigue, human-likeness, timing, emphasis, role fit, perceived comfort	Voice UX evaluation, speech-quality assessment, AI model-output comparison, auditory judgment
Conversational AI assistant improvement	AI-moderated interview focused on suggestions for improving a conversational AI assistant	Usefulness, clarity, feature expectations, trust, response quality, user confidence	Conversational AI feedback, AI assistant evaluation, feature-suggestion reasoning
AI product evaluation	AI-led interviews, AI training conversations, AI response/product reaction tasks	Trust, clarity, usefulness, repetition, missing context, user confidence	Qualitative feedback, human-AI interaction, product judgment
AI productivity and work-tool UX	AI-assisted slide deck generation study and digital workflow studies	Presentation quality, work context fit, editing burden, clarity, usefulness, confidence in AI-generated outputs	AI productivity tool evaluation, presentation workflow analysis, GenAI output assessment
AI-assisted product ideation	Live group video/voice brainstorming session using a provided GenAI tool	Problem fit, feature value, collaboration quality, product purpose, concept clarity	Group ideation, feature brainstorming, product thinking, spoken communication
Bilingual / multilingual language evaluation	Official Hindi and Punjabi language assessments plus language-quality tasks	Fluency, comprehension, naturalness, multilingual clarity	Hindi-English and Punjabi evaluation, cultural context, multilingual AI readiness
UX and usability testing	Website/app feedback via Userlytics, UserTesting, and Prolific partner studies	Navigation, calls-to-action, onboarding, trust signals, task completion	Think-aloud testing, usability feedback, customer experience
Financial services & investment website UX	Recorded comparative prototype/usability test reviewing three investment product website experiences	Trust signals, product clarity, navigation, design preference, financial decision confidence	Fintech UX evaluation, comparative website analysis, product-page critique
Tourism, creator partnership & ROI research	AI-moderated interview on tourism business creator partnership workflow and ROI measurement	Workflow clarity, campaign measurement, trust in creator partnerships, business decision confidence	AI-moderated interview feedback, tourism context, marketing perspective, ROI reasoning
Game and behavioral research	Mobile game playtesting; decision-making and coalition simulation study	Engagement, motivation, strategic choices, preferences, trade-offs	Game UX, behavioral research participation, scenario-based judgment

Selected Anonymized Project Notes

These notes are written for LinkedIn and portfolio use. They summarize project types and skills without revealing confidential prompts, screenshots, completion codes, client data, participant data, audio samples, or unreleased product materials.

1. Human-AI Conversation Psychology Study

Human-AI Interaction / Conversation Psychology / University Research

- Participated in a university-led voice-based study comparing conversations with human and AI partners.
- Reflected on expectations, comfort, anxiety, social pressure, and perceived interaction quality before and after the conversations.
- Gained exposure to how researchers study social and psychological dynamics around AI systems, including comfort, judgment, social risk, and potential benefits or harms.

Skills demonstrated: human-AI interaction research, conversational AI experience, social pressure evaluation, emotional response reflection, HCI research participation

Outcome: Completed a university-led human-AI conversation study, adding an academic HCI and AI psychology category to the portfolio.

2. AI Decision-Making Focus Group

Human-AI Interaction / Qualitative Research / Moderated Focus Group

- Participated in a 75-minute live moderated online focus group exploring how people use artificial intelligence in everyday life.
- Shared personal experiences using AI for work, learning, productivity, and decision-making while discussing where AI is helpful and where human judgment should remain central.
- Contributed to researcher-led group discussion by responding to open-ended questions, listening to other participants, and discussing responsible AI use from a user perspective.
- Experienced qualitative focus-group methodology used to gather human perspectives on AI adoption, trust, decision support, and responsible use.

Skills demonstrated: human-AI interaction, moderated focus groups, qualitative research participation, critical thinking, active listening, collaborative discussion, AI decision-making analysis

Outcome: Successfully completed and approved, adding a live qualitative AI research experience to the portfolio.

3. Conversational AI Assistant Improvement Interview

Conversational AI / AI Product Research / AI-Moderated Interview

- Completed an AI-moderated interview focused on improving a conversational AI assistant experience, including user expectations, feature suggestions, and product improvement ideas.
- Provided feedback on what would make an AI assistant feel more useful, understandable, trustworthy, and aligned with real user needs.
- Practiced structured spoken feedback by explaining improvement priorities, reasoning, and how clearer AI behavior could support user confidence.

Skills demonstrated: conversational AI evaluation, AI assistant product feedback, human-AI interaction, feature-suggestion reasoning, user expectation analysis

Outcome: Completed and approved instantly, adding a conversational AI assistant improvement category to the portfolio.

4. Voice AI, Speech Quality & AI Performance Evaluation Studies

Voice UX / Conversational AI Perception / AI Model Output Evaluation

- Completed voice-rating research involving short audio samples and structured evaluation of voice quality, clarity, pronunciation, rhythm, naturalness, conversational flow, and long-term listening comfort.
- Evaluated AI-generated voice performances against a human reference sample, comparing model outputs on naturalness, human-likeness, timing, pacing, emphasis, and role fit.
- Reflected on how voice characteristics may affect user comfort, listening fatigue, trust, emotional perception, and suitability for digital assistants or performance-style AI systems.
- Practiced consistent auditory judgment using repeated rating scales, similar to AI model evaluation and voice assistant quality assessment workflows.

Skills demonstrated: voice UX evaluation, speech-quality assessment, AI voice performance evaluation, model-output comparison, auditory judgment, human-likeness evaluation, listening-fatigue assessment, conversational AI perception

Outcome: Added a stronger voice-AI evaluation category connected to speech perception, digital assistants, audio model evaluation, expressive delivery, and user comfort in conversational systems.

5. AI-Assisted Collaborative Product Ideation Study

AI-Assisted Product Ideation / Human-AI Collaboration / Group UX Research

- Participated in a live group ideation study involving video and voice discussion with other participants to brainstorm a web application concept.
- Used a provided GenAI tool during the session to support idea generation, refine product concepts, and propose features collaboratively.
- Contributed ideas around product purpose, problem fit, feature design, and user value in a time-limited collaborative research setting.

Skills demonstrated: AI-assisted ideation, human-AI collaboration, group UX research, feature brainstorming, product thinking, spoken communication

Outcome: Completed and approved instantly, adding a highlighted AI-assisted product ideation and collaboration study to the portfolio.

6. AI-Assisted Slide Deck Generation & Presentation Workflow Study

AI Productivity UX / Presentation Workflow / GenAI Work Tools

- Completed a paid user research study focused on recent experience using AI tools to create work-related presentation slide decks.
- Reflected on deck purpose, target audience, project stakes, quality expectations, editing needs, and what makes AI-generated slides useful in a real work context.
- Evaluated AI-assisted deck creation from a user perspective, including content structure, clarity, design polish, customization, trust, and confidence in the final output.

Skills demonstrated: AI productivity tool evaluation, presentation workflow analysis, GenAI output assessment, workplace UX feedback, content quality judgment

Outcome: Added a concrete AI work-tool and presentation workflow study, strengthening the portfolio for AI UX, human-AI interaction, and productivity-tool research roles.

7. AI-Led Product Reaction & Conversation Interviews

Human-AI Interaction / AI Product Evaluation

- Participated in AI-led interview sessions where an AI interviewer asked open-ended questions about product reactions, interest level, trust, and likelihood of engaging with calls-to-action.
- Gave feedback when questions lacked context, repeated similar prompts, or did not show enough product information for a meaningful answer.
- Practiced structured responses by explaining first impressions, reasons, concerns, trust requirements, and what information would improve user confidence.

Skills demonstrated: AI product evaluation, human-AI interaction, conversation feedback, trust evaluation

Outcome: Completed and approved multiple AI-style interview or training studies, including some instant approvals.

8. AI Training, AI Tools & Digital Workflow Studies

AI Training / Digital Product Feedback

- Completed studies involving AI training conversations, response comparisons, coding/AI tool feedback, digital workflows, and platform-use scenarios.
- Evaluated usefulness, clarity, task fit, learning curve, productivity value, and how understandable the tools felt from a user perspective.
- Observed issues such as vague context, repeated AI questions, unclear intent, and the need for better conversational guidance.

Skills demonstrated: AI training studies, AI tool evaluation, workflow evaluation, qualitative research feedback

Outcome: Built exposure to AI/digital-product research beyond standard surveys and simple usability tasks.

9. Rubric-Based Candidate Interview Evaluation Study

Structured Evaluation / Rubric-Based Judgment / University Research

- Completed a university-led study involving evaluation of recorded candidate interview responses for a professional role using structured behavioral rating rubrics.
- Listened to short interview answers, compared each response against defined criteria, assigned scores, and made an evidence-based interview recommendation.
- Provided written comments explaining the candidate evaluation using the rubric, response quality, role fit, and decision threshold.

Skills demonstrated: rubric-based scoring, structured listening, evidence-based judgment, candidate-response evaluation, written justification, quality evaluation

Outcome: Completed a university-led evaluation study, adding a strong rubric-based assessment and AI/content-evaluation-aligned category to the portfolio.

10. Fintech Investment Website Comparative Usability Test

Fintech UX Research / Comparative Usability Testing / Investment Product Evaluation

- Completed a recorded prototype/usability testing study requiring spoken feedback while reviewing investment product website experiences from three financial institutions.
- Compared website design, navigation, information clarity, trust signals, product presentation, and how confident a user may feel when exploring investment options.
- Provided comparative feedback on what felt more understandable, credible, easy to use, or confusing across the different financial product experiences.

Skills demonstrated: fintech UX evaluation, comparative website analysis, trust and clarity assessment, think-aloud testing, financial product feedback

Outcome: Completed a long-form recorded study, adding a financial services and investment UX category to the portfolio.

11. Website & App Usability Testing

UX Research / Usability Testing

- Completed app and website usability tests involving navigation, user expectations, trust, product clarity, calls-to-action, and task completion.
- Used think-aloud feedback to explain what felt clear, confusing, trustworthy, or difficult while moving through digital interfaces.
- Relevant testing areas include banking/credit offers, mobile apps, web information pages, product feedback flows, investment product pages, and app-based experiences.

Skills demonstrated: usability testing, think-aloud feedback, navigation evaluation, customer experience

Outcome: Built experience across Userlytics, UserTesting, and Prolific partner-style tasks, including approved paid tests and submitted recorded studies.

12. Hindi, Punjabi & Multilingual Language Assessment

Bilingual / Multilingual Language Research / AI Language Evaluation

- Completed official Hindi and Punjabi language assessment tasks related to fluency, comprehension, bilingual communication, and language quality.
- Applied South Asian language perspective to evaluate clarity, naturalness, and user understanding across English, Hindi, and Punjabi language contexts.
- This aligns with future multilingual AI evaluation, localization testing, and language-focused UX research.

Skills demonstrated: Hindi-English and Punjabi evaluation, language assessment, communication, multilingual product feedback, cultural context

Outcome: Official language assessments approved, supporting a multilingual AI/language research profile.

13. Tourism Creator Partnership & ROI Workflow Interview

Tourism UX Research / AI-Moderated Interview / Marketing Workflow Evaluation

- Completed an AI-moderated interview study focused on tourism businesses, creator partnership workflows, and ROI measurement.
- Provided feedback using travel services, marketing, and customer experience context to evaluate how tourism businesses may assess creator collaborations and campaign value.
- Practiced clear, structured responses around workflow clarity, business goals, measurement challenges, and decision-making confidence.

Skills demonstrated: AI-moderated interview feedback, tourism business context, marketing workflow evaluation, ROI reasoning

Outcome: Completed and approved instantly, adding a tourism and creator-partnership research category to the portfolio.

14. Mobile Game Playtesting - Multi-Day Recorded Study

Playtesting / Game UX

- Completed multi-day iPhone game playtest sessions requiring recorded gameplay, headphones, spoken feedback, and post-session surveys.
- Evaluated onboarding, motivation, gameplay flow, task clarity, story mode, multiplayer timing, and overall player experience.
- Followed time-sensitive study requirements across multiple days and completed the final survey for review.

Skills demonstrated: game playtesting, mobile UX, survey feedback, motivation and engagement analysis

Outcome: Completed a multi-day paid playtest and successfully followed up when review issues needed clarification.

15. Strategic Decision-Making & Coalition Simulation Study

Decision-Making Research / Behavioral Research / Scenario-Based Judgment

- Completed a university-style scenario study involving role-play as a government minister making alliance and coalition decisions on behalf of a nation.
- Worked through decision scenarios, chose whether to coordinate with other nations, and ranked preferences among available options.
- Practiced structured reasoning around strategic choices, trade-offs, priorities, and decision confidence in simulated political and organizational contexts.

Skills demonstrated: behavioral decision-making research, scenario-based judgment, strategic reasoning, preference ranking, decision-support evaluation

Outcome: Completed and submitted a scenario-based decision-making study, adding behavioral research and strategic judgment exposure to the portfolio.

16. Research Follow-Ups, Product Feedback & Workplace Studies

Research Participation / Product Research

- Completed short and medium-length paid research tasks involving product opinions, job-posting impressions, website information review, workplace questions, and follow-up responses.
- Provided written explanations, decision reasoning, and structured survey responses rather than only quick multiple-choice answers.
- Built consistency across repeated research projects, increasing exposure to participant quality expectations and research methods.

Skills demonstrated: survey research, written feedback, decision reasoning, attention to instructions

Outcome: Multiple projects approved across paid research platforms, strengthening reliability and research participation discipline.

Transferable Skills

UX & Research - User experience research - Usability testing - Think-aloud feedback - Comparative UX analysis - Product feedback - User behavior observation - HCI research participation - Moderated focus groups - Qualitative discussion research - Voice UX evaluation - Speech-quality assessment	AI & Language - AI product evaluation - Human-AI interaction - Conversational AI feedback - AI assistant improvement suggestions - Human-centered AI research - AI decision-making evaluation - Voice AI perception - AI voice performance evaluation - Model-output comparison - Bilingual Hindi-English evaluation - Punjabi language assessment - Multilingual AI readiness	Business & Communication - Customer experience - Marketing perspective - Travel services context - Operations discipline - Clear written and spoken feedback - Tourism business context - Creator partnership workflow - ROI and marketing measurement - Collaborative communication - Active listening	Product & Decision Evaluation - Financial services UX - Investment website evaluation - Trust-signal review - Product-page critique - User confidence assessment - Decision-support clarity - AI-generated content quality - Candidate-response scoring - Trade-off analysis - Strategic decision reasoning - Timing, pacing, and emphasis evaluation

Career Direction & Academic Alignment

This experience supports a future path in UX Research, Human-Computer Interaction (HCI), AI UX research, Human-AI Interaction, voice UX, speech-quality evaluation, AI model-output evaluation, multilingual/localization UX, AI productivity-tool evaluation, behavioral product research, qualitative AI focus-group research, and structured AI/content evaluation. It shows early evidence of research participation, product judgment, structured feedback, multilingual evaluation, and interest in how people understand, trust, hear, and work with AI systems.

Best-fit future roles: UX Researcher, AI Product Researcher, Human-AI Interaction Researcher, HCI Research Assistant, AI Product Evaluator, AI Content/Quality Evaluator, Conversational AI Analyst, Voice UX Research Assistant, AI Audio Evaluation Specialist, Localization UX Researcher, Multilingual AI Evaluator, AI Productivity UX Researcher, and Research Operations Assistant.

Confidentiality Note

This document is designed for professional positioning only. It summarizes project categories and transferable skills without disclosing confidential research questions, private platform information, completion codes, participant data, screenshots from tasks, audio samples, exact study prompts, model names, or unreleased product details. Project names and descriptions are generalized where needed to protect confidentiality.
